

## Introduction

In this play we will talk about the pandas subtopics - series, zip and enumerate.

## Objective

In this play we will be learning the following :

1. What is pandas series object and how it can be created by various methods and ways of accessing values in the series object.
2. What is the python zip function and how it can be utilised in pandas for iteration through a set of elements.
3. What is python enumerate function and how it can help in keeping the count of iteration in various applications.

## End Point

At the end of this you will know about the pandas series object and python zip and enumerate functions and utilize these concepts in your work and work efficiently through projects.
